What is DAB Radio?

DAB stands for Digital Audio Broadcasting, this is a way of broadcasting radio digitally via a network of transmitters. It provides listeners with more choice, reduced interference with no hiss or crackle and scrolling text information.

More Choice

Because of the way DAB technology works, broadcasters can transmit many more stations than ever before. Listeners in most major towns and cities in the UK can receive between 30 and 50 radio stations with a digital radio, in many cases that's more than double what's available on analogue. Because digital radio uses the spectrum more efficiently than analogue, it is possible to broadcast more channels using the same frequency, making room for broadcasters to expand their station portfolios.

Less Noise

DAB transmission eliminates the hiss, crackle and fade so familiar on analogue radio. With a digital signal you either receive it or you don't.

Ease of Use

A DAB digital radio will tune to a station at the touch of a single button. No more fine tuning a station to get the best reception. A DAB set allows the listener to scroll through a list of available stations in alphabetical order - then tune in by pressing the 'select' button.

What does this logo mean?

Roberts has introduced a range of Bluetooth models called Blutune, these enable you to stream your personal music collection via Bluetooth from any of your Bluetooth enabled devices.

Bluetooth technology is a short-range communications technology that is simple and secure, it is a way of exchanging data wirelessly over short distances. Using a radio frequency to transmit data, it creates a short range connection. It is intended to replace the cables connecting devices, while maintaining high levels of security.

Spotify Connect explained

With Spotify, you can enjoy unlimited music on your new device. Thanks to the Spotify Connect feature, you can play and control all this music wirelessly. Choose music on your mobile or tablet, and hear it on your selected Roberts Radio.

FREE Remote Control App

Connected Radio

ConnectR

ConnectR is a free application that once downloaded, acts as a remote control for your Wi-Fi radio. Using your iPod touch or iPhone you can connect to either one or several Roberts internet radios and control them all wherever they are in the house via your wireless internet connection.

Available on the
App Store

GET IT ON
Google play

What is Connected Radio?

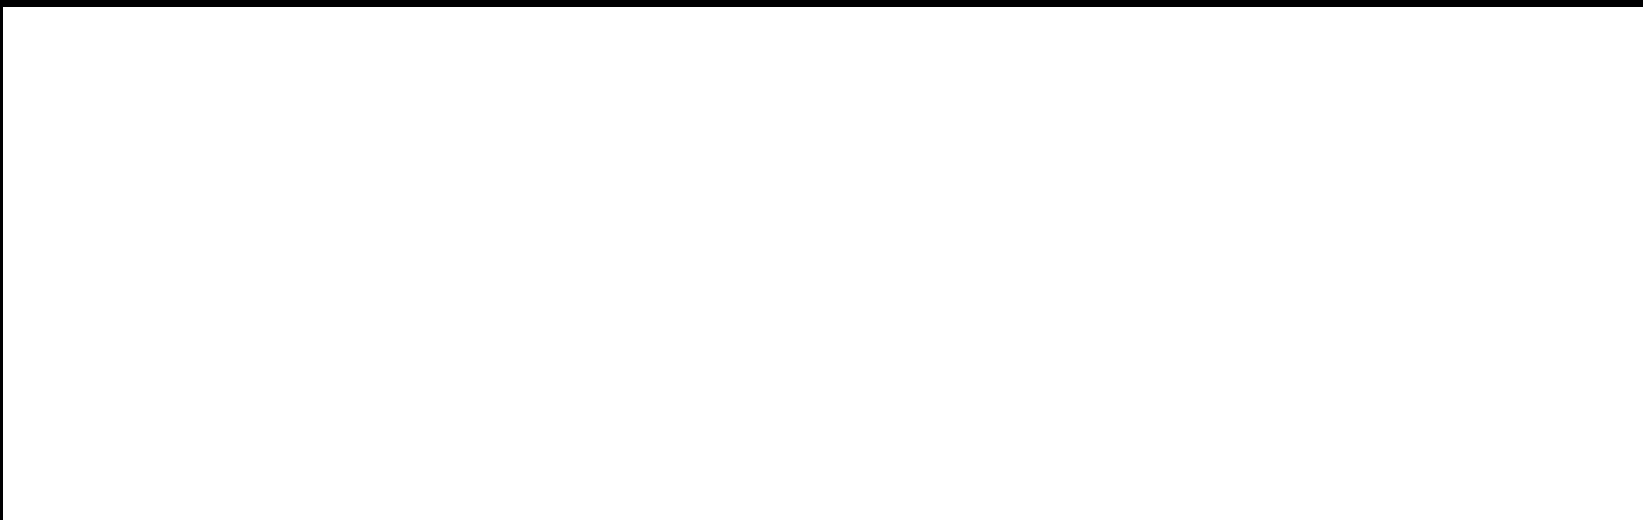

ROBERTS internet radios enable you to connect to over 15,000 internet radio stations from all over the world and also offer a 'Listen Again' feature that allows you to listen to previously broadcast programmes at your leisure.

Browsing stations is really simple thanks to on-screen radio station listings that are automatically updated and conveniently sorted into country or genre. All you need to get started is a broadband internet connection with either a wireless router or wired Ethernet connection.

Why internet?

- Access over 15,000 radio stations from around the world
- Stream your personal music collection from your PC to your radio. Listen to your entire digital music collection away from your PC
- Listen to podcasts it can be your favourite radio programme, DIY tips or even foreign language lessons
- Your radio is automatically updated with new software
- Listen again features, radio on demand has never been easier
